BlueSpace® Responds to Intense Market Interest in TransMail 4.0

BlueSpace Agrees to Participate in a Series of Industry Conferences in August 2008 to Demonstrate TransMail's Unique Multi-Level Messaging Capabilities

AUSTIN, TX, July 8, 2008 – BlueSpace Software Corporation, a leader in trusted messaging systems, announced that interest in TransMail 4.0 Trusted Edition in the intelligence and defense market continues to accelerate as these organizations seek to significantly improve analyst information sharing and productivity to get more accurate, actionable and timely intelligence.

To respond to the intense interest, BlueSpace is working with partners Sun Microsystems and Sterling Computers to attend a series of industry conferences and provide demonstrations of TransMail Trusted Edition 4.0. TransMail 4.0 was recently released as a generally available product on June 30, 2008.

In June, BlueSpace CEO Justin Marston attended the Network Centric Warfare Europe 2008 Conference in Rome, Italy. NCW Europe is the world's leading event examining developments and the implementation of latest technology to enhance Net-Centric Operations (NCO) across leading European nations. At the conference, Mr. Marston made a presentation entitled "Examining Information Assurance in a Networked Environment". In addition, BlueSpace and Sun demonstrated the Beta version of TransMail Trusted Edition in the Sun booth.

"The interest in multi-level messaging, our unique approach and the overall capabilities of our product is nothing short of overwhelming", said BlueSpace CEO, Justin Marston. "It is clear that the intelligence, defense and law enforcement organizations around the world are committed to modernizing the technology and processes used to gather and disseminate intelligence – and messaging is right at the center of that commitment."

Sterling Computers is a BlueSpace Channel Partner and Preferred Services Provider for deploying TransMail multi-level messaging solutions. "Our customer base continues to be keenly interested in multi-level messaging solutions," noted Jeff Moore, VP of Business Development for Sterling Computers. "Our strategic partnership with BlueSpace continues to keep Sterling at the leading edge of providing multi-level solutions to meet the critical needs of our customers."

During the month of August, BlueSpace will also be attending three other key industry conferences and demonstrating TransMail Trusted Edition 4.0 at two of them in conjunction with Sterling and Sun. Those conferences are:

US Stratcom Synergy Conference; August 12 – 14; Marco Island, Florida. This conference provides a unique forum to highlight advances the Intelligence and Operations communities have made in support to military operations in a tactical wartime environment and how these may reform national-level processes.

LandWarNet; August 19 – 21; Ft. Lauderdale, Florida. This conference is the premier forum to bring Government and Industry together to openly communicate commercial best business practices and government implementations.

Air Force Information Technology Conference; August 24 – 26; Montgomery, Alabama. This conference focuses on how information is created locally and shared globally through the Air Force's vast communications capabilities, and used operationally in support of the warfighting effort and cyberspace domain.

About BlueSpace

"BlueSpace Software is a leading provider of trusted messaging and multi-level solutions. BlueSpace TransMail is a messaging system that was built from the ground up to be "secure by design". TransMail supports metadata integration into messages via XML, and this data can be used within customer defined rules to define access control, communication and retention policies – enabling attribute-based information sharing, backed up by rigorous audit logs. This design enables TransMail to be core to secure messaging solutions in defence, intelligence, government, health care and financial services. TransMail Trusted Edition is the first commercial off-the-shelf (COTS), multi-level end user application – providing a user with a single inbox for messages across multiple classification levels. Also available, the BlueSpace Trusted Service Bus enables rapid development of multi-level user interfaces for both COTS software applications and custom solutions. BlueSpace is privately held and is headquartered in Austin, Texas."
