## **BlueSpace® Announces the Availability of TransMail 4.1**

*Advanced Multi-Level Messaging Application Delivers New Capabilities*

**AUSTIN, TX, January 26, 2009** – BlueSpace Software Corporation, a leader in trusted messaging systems, announced the availability of Version 4.1 of TransMail. New capabilities in Version 4.1 include an SMTP Gateway, an enhanced X.400 Gateway, Web 2.0 Administration UI and enhancements in reporting, management, performance and availability. TransMail 4.1 is available immediately.

TransMail is available in both Standard Edition and Trusted Edition versions. TransMail Trusted Edition is a true multi-level messaging application built on the BlueSpace Trusted Service Bus and based on the BlueSpace Multi-Level Architecture.

“This new version continues to enhance our core technology to meet broader and more demanding client requirements” explained Pat Motola, BlueSpace COO and VP of Development. “We also are continuing to enhance the underlying technologies that make up our Trusted Service Bus and Multi-Level Application Framework both for TransMail and for other multi-level applications.”

The SMTP and X.400 Gateways enable TransMail to integrate into messaging frameworks that require TransMail to send and receive mail with these messaging systems. Improved clustering enables greater system performance, throughput and availability. The new Administration UI, reporting enhancements and management enhancements make it easier to install, configure and operate TransMail.

### **About BlueSpace**

“BlueSpace Software is a leading provider of trusted messaging and multi-level solutions. BlueSpace TransMail is a messaging system that was built from the ground up to be “secure by design”. TransMail supports metadata integration into messages via XML, and this data can be used within customer defined rules to define access control, communication and retention policies – enabling attribute-based information sharing, backed up by rigorous audit logs. This design enables TransMail to be core to secure messaging solutions in defence, intelligence, government, health care and financial services. TransMail Trusted Edition is the first commercial off-the-shelf (COTS), multi-level end user application – providing a user with a single inbox for messages across multiple classification levels. Also available, the BlueSpace Trusted Service Bus enables rapid development of multi-level user interfaces for both COTS

software applications and custom solutions. BlueSpace is privately held and is headquartered in Austin, Texas.”
