## BlueSpace® Speaking at UCDMO Conference in Boston

*Talk on “Multi-Level Applications” Reinforced by Real Technology From BlueSpace at UCDMO Conference in Boston, MA August 9-12, 2010*

**AUSTIN, TX, August 2, 2010** – BlueSpace Software Corporation, a leader in multi-level security (MLS) applications and middleware, will be participating in the 2010 UCDMO Conference in Boston, MA. BlueSpace’s own David Sundstrom will be speaking at the conference as part of the AFRL track. He will be speaking about BlueSpace’s S2 {search and share} project, funded by NSA I813. Mr. Sundstrom will be describing the architecture and showing the user interface.

The BlueSpace Discover application, which is based on the S2 project, utilizes highly innovative BlueSpace middleware that is the basis of a full suite of BlueSpace MLS applications. Unique to the BlueSpace approach is that content is not elevated to higher security levels, but remains at its original security level under that network’s mandatory and discretionary access controls. This approach improves both security and information sharing and enables modern commercial-off-the-shelf (COTS) technologies like Google Enterprise Search™ appliances to be securely and quickly adapted to perform as a multi-level application with a single user experience.

### About BlueSpace

BlueSpace Software is a leading provider of trusted messaging and multi-level solutions. BlueSpace uses an innovative approach to multi-level solutions providing users with the power to securely view and interact with information across multiple security levels without the need to move the data itself. Besides dramatic improvements in user productivity and collaboration, data remains properly classified, commercial applications can be used and accreditation is faster and cheaper. BlueSpace Unity is a powerful multi-level messaging application – providing users with a single inbox for messages across multiple classification levels. BlueSpace also has patent pending middleware technology that enables its innovative multi-level approach. Additional multi-level applications include multi-level search and multi-level command and control. BlueSpace is privately held and is headquartered in Austin, Texas.
