BlueSpace® Presenting at the 2011 ISSE/SABER User Conference

BlueSpace Product Manager, Moriah Chandler, will speak at the ISSE/SABER User Conference in Myrtle Beach, SC December 6-8, 2011

AUSTIN, TX, November 22, 2011 – BlueSpace Software Corporation, a leader in multi-level security (MLS) applications, announced that Product Manager Moriah Chandler will be speaking at the ISSE/SABER User Conference in Myrtle Beach, SC on December 8, 2011. Ms. Chandler will provide an overview of BlueSpace MLS applications, which are PL4 certified for TSABI on the SABER platform.

To reinforce the talk, Ms. Chandler will provide a presentation that outlines BlueSpace technologies and capabilities, including information on the three software applications that are certified on the SABER 4.3 baseline. These include a Trusted Service Bus (TSB), which serves as an orchestration server between the end-user applications and the platform they run on; Unity, a multi-level email client that runs on Exchange servers; and Discover, a multi-level search application that aggregates search results from different domains.

“BlueSpace recently finalized our certification and test evaluation (CT&E) through the DIA for our software to run on the SABER platform,” Ms. Chandler said. “The conference will give us a chance to present these applications to an important audience and will demonstrate the many ways in which MLS can be beneficial, including cost reduction due to less hardware, easing user frustration, and improving response time.”

The user conference will last three full days from December 6-8 and will primarily be made up of sites currently operating or considering installation of the ISSE and/or SABER systems. Demonstrations, specialized trainings, and meetings will be available for both systems. It will be held at the Myrtle Beach Marriott Resort and Spa at Grande Dunes, located at 8400 Costa Verde Drive.

About BlueSpace

BlueSpace Software is a leading provider of trusted messaging and multi-level secure (MLS) solutions. BlueSpace uses an innovative approach to MLS solutions, providing users with the power to securely view and interact with information across multiple security levels without the need to move the data itself. BlueSpace offers three multi-level secure (MLS) applications that span network domains and security levels - including an email client (Unity) that provides a single inbox/calendar and a C2ISR application (GeoSpace) that provides a COP - both displaying information from multiple security levels. BlueSpace's technology is TSABI PL4 Certified. BlueSpace is privately held and is headquartered in Austin, Texas with a satellite location in Springfield, Virginia.
