BlueSpace® Announces Plans for Mobile MLS Applications

Plans Will Enable a Suite of MLS Applications that run on any Trusted Device

AUSTIN, TX, January 9, 2012 – BlueSpace Software Corporation, a leader in multi-level secure (MLS) applications, announced several changes to leverage its position in providing applications for MLS desktops and extend those offerings to secure mobile platforms. The actions reflect a strong belief by the company that intelligence users and warfighters increasingly require MLS application capabilities on a variety of computing devices to effectively accomplish their missions.

Justin Marston, Founder, and Brian Vetter, CTO, will depart to form a new company in the secure mobile platform space. BlueSpace will partner with the new entity to deliver MLS applications on the mobile platform for the defense and intelligence communities.

BlueSpace President, Pat Motola, will take over as CEO and continue to develop BlueSpace as the premier provider of MLS applications. Johnny Cope has been appointed to Vice President of Solutions Engineering responsible for account management and partnerships. David Sundstrom has been appointed to Vice President of Engineering and Services responsible for product development and solution delivery.

“Thought leading companies need to be willing to take big steps to pursue their vision by leveraging new technologies, customer needs and market trends,” noted Pat Motola, BlueSpace President and CEO. “Providing highly secure, MLS applications on mobile platforms and trusted desktops is a critical capability to make intelligence personnel and warfighters more effective and efficient in their respective missions.”

About BlueSpace

BlueSpace Software is a leading provider of multi-level secure (MLS) solutions. BlueSpace uses an innovative approach to MLS solutions, providing users with the power to securely view and interact with information across multiple security levels without the need to move the data itself. BlueSpace offers three multi-level secure (MLS) applications that span network domains and security levels - including an email client (Unity) that provides a single inbox/calendar, a C2ISR application (GeoSpace) that provides a COP, and a federated search application (Discover) - all displaying information from multiple security levels. BlueSpace's technology is TSABI PL4 Certified. BlueSpace is privately held and is headquartered in Austin, Texas with a satellite location in Springfield, Virginia.
