BlueSpace® Software Applications Become PL4 Certified

*BlueSpace's Multi-Level Applications are certified by the DIA
for the SABER 4.3 baseline*

AUSTIN, TX, August 25, 2011 – BlueSpace Software Corporation, a leader in multi-level security (MLS) applications, announced that they have successfully gone completed TSABI PL4 Certification by the DIA as part of the Secure Access Baseline for the EnteRprise (SABER) 4.3 baseline.

The Certification & Accreditation (C&A) process recommended BlueSpace's Trusted Service Bus (TSB) to be approved for the SABER 4.3 baseline. The TSB is available as an option to SABER 4.3 and serves as an orchestration server between BlueSpace applications running at various security levels. Certification of the TSB allows BlueSpace's multi-level email application (Unity) and multi-level search application (Discover) to run on the SABER platform.

"The TSB is designed to provide seamless access to multiple domains without moving content across or between those domains," said David Sundstrom, Director of Engineering at BlueSpace. "BlueSpace applications make working in a multi-level environment as easy as working within a single level."

The SABER technology offers a multi-level desktop system that supports the use of thin clients. The trusted workstation enables defense and intelligence organizations to guarantee high-risk processes are completed in a secure manner. SABER is a collaborative project between the Air Force Research Lab and Northrop Grumman.

About BlueSpace

BlueSpace Software is a leading provider of trusted messaging and multi-level secure (MLS) solutions. BlueSpace uses an innovative approach to MLS solutions, providing users with the power to securely view and interact with information across multiple security levels without the need to move the data itself. BlueSpace offers three multi-level secure (MLS) applications that span network domains and security levels - including an email client (Unity) that provides a single inbox/calendar and a C2ISR application (GeoSpace) that provides a COP - both displaying information from multiple security levels. BlueSpace's technology is TSABI PL4 Certified. BlueSpace is privately held and is headquartered in Austin, Texas with a satellite location in Springfield, Virginia.
